- Converted HTML/CSS mock-ups to fully functional front-end production code, making appropriate use of scripting technologies and frameworks
- Ensured the technical feasibility of UI/UX designs
- Bug fixing and support related UI issues

THESIS ON TOPIC "DEVELOPMENT OF HIGH PRECISION NEUROMORPHIC CIRCUIT IN REARRANGED TECHNOLOGY"
University of Thesaly
2021 - 2022

Implementation of a circuit using FPGA technology, which simulates a neuron. The proposed circuit is based on Izhikevich's mathematical model and exhibits improved performance over similar implementations. Executed through EDA playground enviroment, using VHDL code.
